 The Implementation of Cognitive Screening and Educational Support to Improve Outcomes of Adolescents and Young Adults with Sickle Cell Disease: From Clinic to the Community and Back (U01).  
 The overall goal of this project is to use implementation science methods to improve outcomes of adolescents and adults with sickle cell disease.  
 Role: co-investigator; Dissemination and Implementation Research Core Coordinator

Washington University in St. Louis 10/01/16 – 09/30/17

Institute for Public Health, Center for Dissemination and Implementation  
 “Pre-Implementation of an Evidence-Based Parent Intervention in Brazil”  
 This project is funded through the Pilot Projects in Dissemination and Implementation Science Program of the Center for Dissemination and Implementation of the Washington University Institute for Public Health. This project seeks to understand stakeholder perspectives in Brazil about the Parent Management Training-Oregon Model (PMTO), an evidence-based program designed to help parents strengthen families at all levels. Informed by an evidence-based implementation framework, the project will conduct focus groups and semi-structured interviews with parents, providers, agency leaders and treatment developers to gather information about agency characteristics, system characteristics, intervention characteristics, and fit of the PMTO intervention for the Brazilian population.

Find your Beat: Toolkit to increase physical activity in rural cancer survivors

Because cancer survivors living in rural communities experience poorer health and quality of life, it is important to provide rural cancer survivors with the tools they need to exercise more regularly as one way to help improve their physical and mental well-being. We have designed the BEAT Cancer intervention which has been shown to increase the amount of exercise done by breast cancer survivors during and after the intervention. This proposal will collect the information needed to make the intervention available and successful in rural cancer care settings and among women of any cancer type.

Implementation Research Institute for Mental Health Services (IRI-MHS)

This R25 proposes: (1) to conduct an Implementation Research Institute (IRI) annually in St. Louis, MO, led by multidisciplinary faculty from across the nation with specialized expertise in IR; (2) to support IRI fellows' learning through activities between summer IRIs, including site visits to research centers conducting NIH-funded implementation research and to facilitate their pilot studies in clinic and agency settings; (3) to develop and disseminate an implementation research course module for use by other mental health research training programs nationally; (4) to support IRI Core Faculty in writing and disseminating an annual scholarly paper that synthesizes the conceptual, substantive, and methodological advances in implementation research; and (5) to systematically evaluate these educational training efforts.

Research Funding Program of the Barnes-Jewish Hospital Foundation and the WU ICTS. A

Dissemination and Implementation Research Core (DIRC) will make available to ICTS

investigators the methodological expertise required to advance translational research in health.

Dissemination and implementation research (D&I) constitutes the scientific study of how to move efficacious health practices from clinical knowledge into routine, real-world use.

A Multilevel Approach to Energy Balance and Cancer across the Lifecourse

The goal of this program is to use multilevel and multigenerational approaches to address mechanisms linking obesity and cancer. To achieve this goal we propose a series of related studies that range from the cellular or epigenetic level in laboratory models; to energetics in

cancer patients in relation to morbidity; to local and workplace policies that impact nutrition and physical activity leading to obesity; and an integrative modeling of obesity across the life course and across generations that impacts cancer incidence and survival.

“Health, Energetic, Parent Intervention Program (HEPIP)”

This project is funded through the Pilot and Feasibility Program of the Center for Diabetes Translation Research. The project aims to (a) adapt the PMTO intervention by embedding activities related to nutrition and activity behaviors during the sessions; and (b) examine the feasibility and acceptance of embedding activities related to nutrition and activity behaviors in the PMTO intervention via focus groups with PMTO therapists.

(Patterson, PI)

This project is funded through the Pilot Projects in Dissemination and Implementation Science Program of the Center for Dissemination and Implementation of the Washington University Institute for Public Health. This project has two primary activities: 1) conduct a mixed methods assessment of readiness for implementing a supervisor-facing electronic clinical dashboard within a network of addiction service organizations, and 2) adapt a prototype of the clinical dashboard—currently under development for frontline providers—to be used by clinical supervisors in addiction service organizations.

Adapting Interventions for Diverse Ethnocultural Families

We propose to bring together leading scholars in child and adolescent mental health, behavioral sciences, and intervention research to address five objectives: (1) to generate and refine conceptual models for adaptation that can generalize to diverse groups; (2) to identify and develop theoretically based methodologies for adapting extant interventions; (3) to foster dialogue among intervention developers and intervention adapters on navigating between the core elements of interventions and adaptation processes; (4) to support the development and

testing of models, theories and methods for intervention adaptation by investigators, especially junior researchers; and (5) disseminate meeting content through print and state-of-the-art electronic media made accessible to the public, clinicians, and investigators around the world through our interactive website.
